

Auto-tracking AF and Auto Framing

Auto-tracking AF

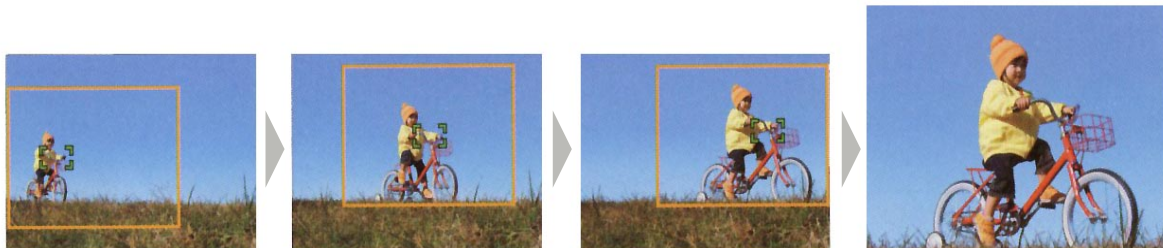

Press the capture button halfway down, and the subject comes into focus. Keep holding it, and the focus frame will follow a moving subject, making sure it stays in sharp focus.

Auto Framing keeps the subject in the center of the photo

Ideal for capturing a moving child or pet, the Auto Framing function has a focus and capture frame that automatically follows a moving subject, ensuring it ends up in the center of the photograph.

* Only available at 3.0-megapixel image size

The camera automatically focuses on and center frames the moving subject.
